

(Installation of Operating System in Raspberry Pi 4)

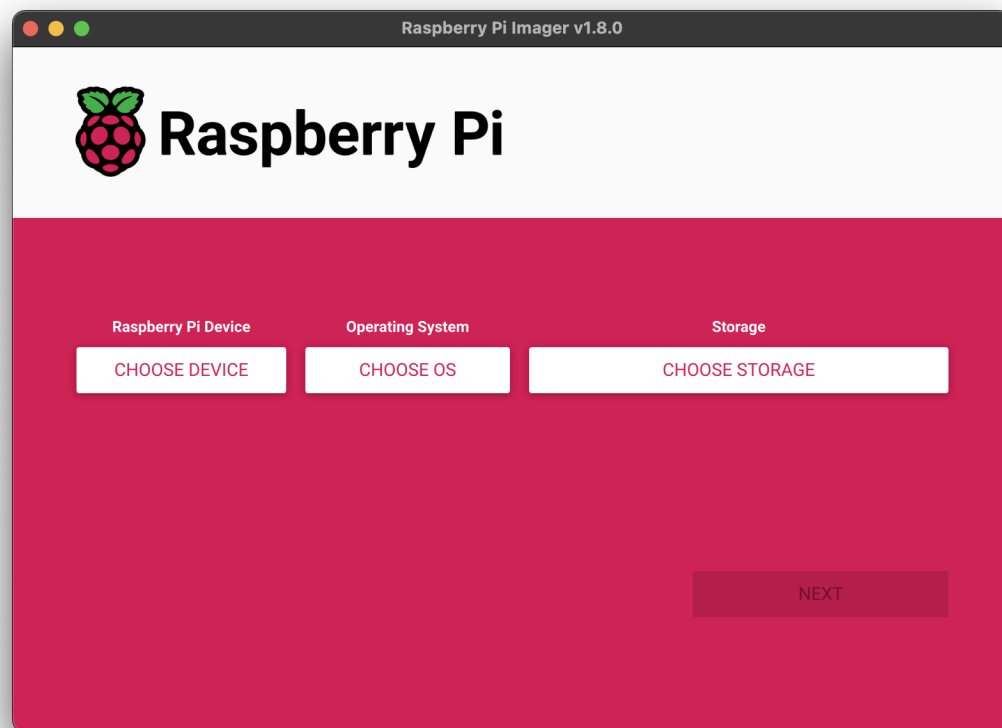

Note: Buy a decent drive (at least 32 GB) with faster data transfer rate for smoother operation

Step 1: Flash your micro SD Card/ Pendrive to FAT-32 Format.

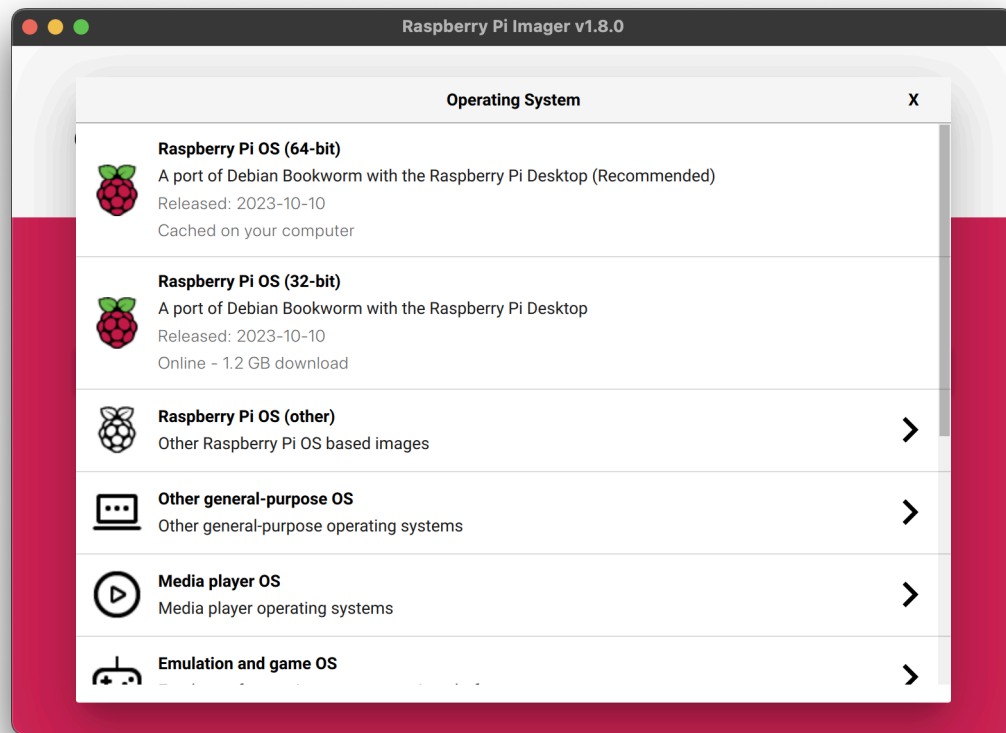

Step 2: Go to:- <https://www.raspberrypi.com/software/> and download the Raspberry Pi Imager installer file for (Win/Mac OS).

Step 3: Install the downloaded file and open the application.

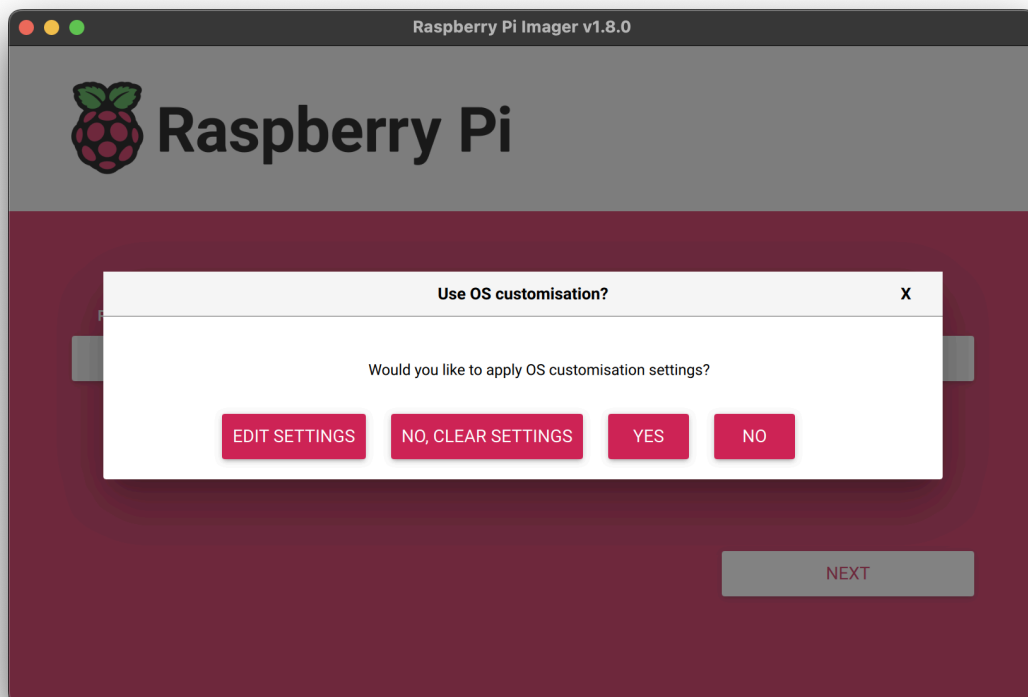

This is what the interface should look like:

Step 4: Select **Raspberry Pi 4** as the device, and the OS will be **Raspberry Pi OS - 64 bit**. And under Storage, select the **SD card or pendrive** that you've connected. And then press **NEXT**.

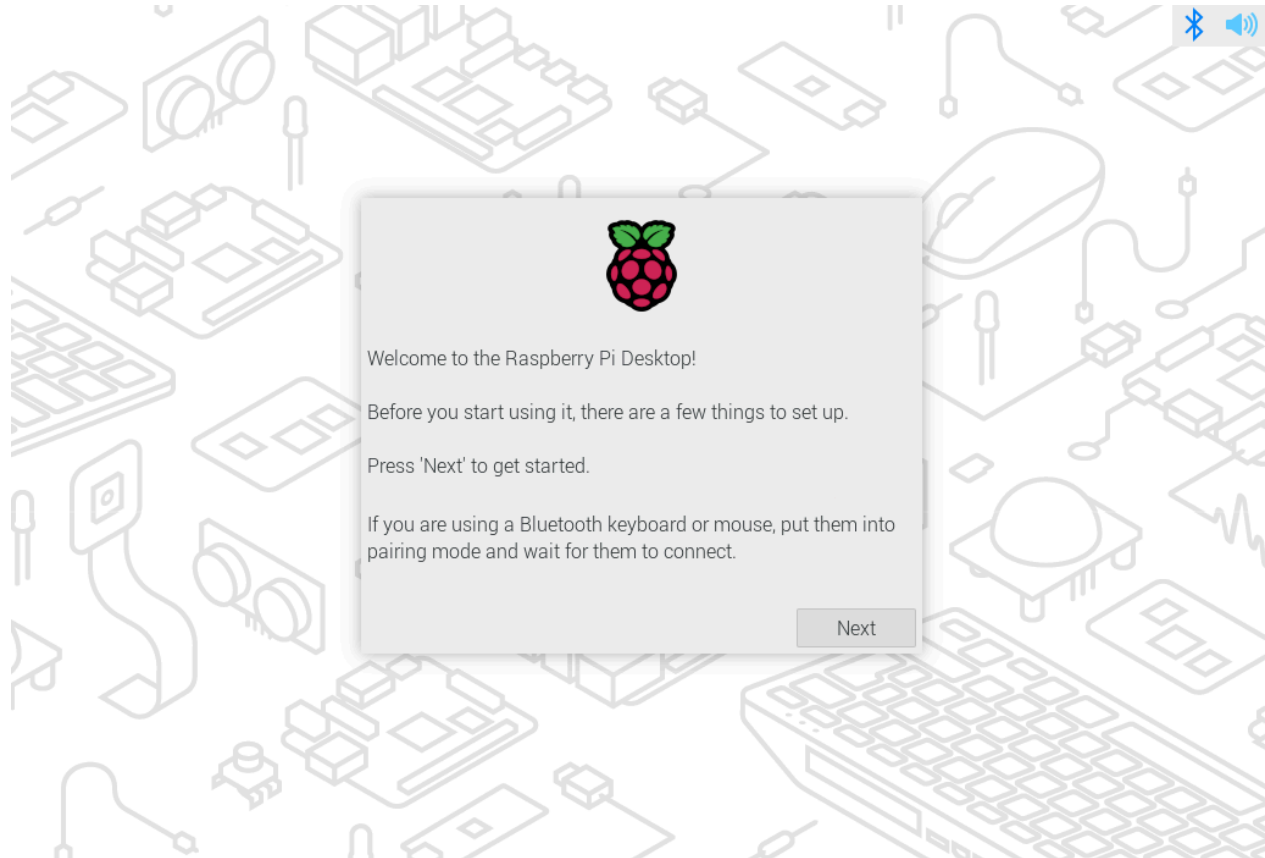

Step 5: Press **NO** when asked for OS customization.

Step 6: Insert the **SD card into the card slot** below or the **pen drive into the USB slot** in the Raspberry Pi.

Step 7: Connect the Raspberry Pi to a monitor via an **HDMI connector**, connect the **power supply**, and turn it on. The system should boot automatically, and you can operate it via a keyboard and mouse. If everything works properly, you will see the boot up screen:

Step 8: Follow the instructions given below for the next steps:

- Set the Country and Timezone
- Create User (You can choose any username and password)
- Skip connecting wi-fi at this stage
- Select browser (Chromium or Firefox. Either is fine)
- **Skip Update Software**

Step 9: After you are done configuring the OS, the system will reboot. Once completed the interface would look like this:
